Nivolumab plus chemotherapy versus chemotherapy as first-line treatment for advanced gastric / gastroesophageal junction / adenocarcinoma of Esophagus: first results of the study Checkmate 649. In all Randomized patients, the FC was 0.80 (95% CI, 0.68-0.94; p = .0002). The Nivolumab containing scheme also resulted in an improvement in the objective response rate (ROR) on chemotherapy alone, by 60% (95% CI, 55% -65%) vs 45% (95%, 40% -50%), respectively (p
