Successful forex trading strategies pdf download pdf files download

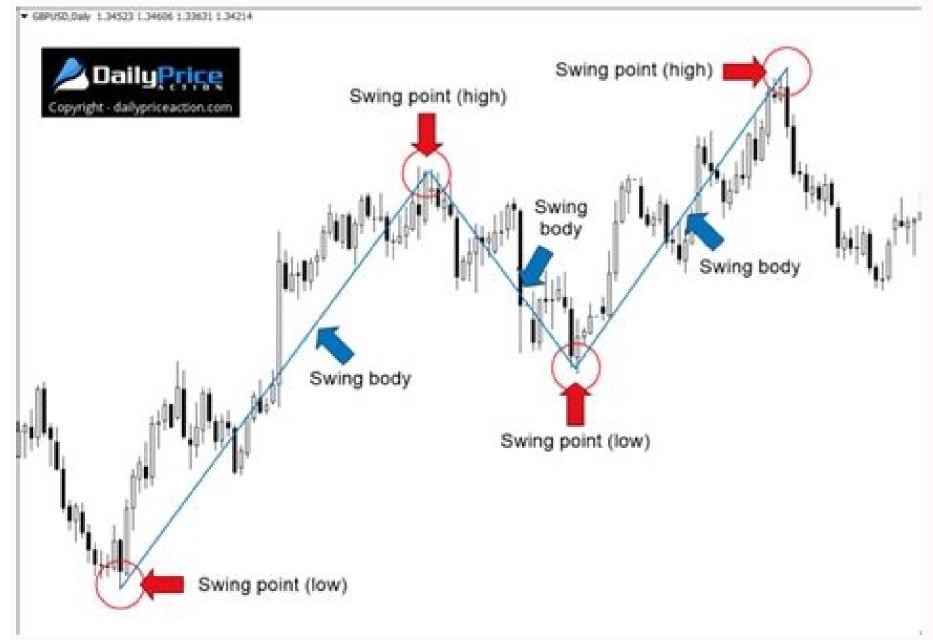

I'm not robot!

The most profitable foreign exchange strategy, which was developed by me if you are tired of pouring a deposit and have not been able to find (design) a profitable foreign exchange system, then I advise you to read the description of the end of this Forex strategy without indicators. I've probably never seen this kind of strategy, and maybe this is your only chance to make money in Forex. Besides, I deliberately put it in free access and I don't exude anything in return. But why I did it, you'll understand it only if until the end of the text reads, good luck. Description Manual Forex Strategy. This profitable trading system is based on the relationship of open positions of Forex traders, which can often be found on the website of the brokers themselves and are seen as follows: but the information provided by these tables is not enough for a complete business strategy. You should still process and be able to use it properly. For this trading system in the Forex, more than twenty of these sources were used. And the address of the opening of transactions is based on statistical data. For a deeper understanding of this profitable trading system, I suggest you see the video with your detailed description. He started to bring more than 100% about the capital invested in a month (shown in the video) from the beginning of the negotiation in a live account. YouTube channel strategy subscribes to the new video! Trade with the help of the best foreign trade strategy. For successful trade, we need more statistics that we will record on the table and dicrosoft Office Excel. It is necessary for the operation of the strategy and is an integral part of "static" of the negotiation system. Then you will describe to follow theso that you can go to Tener. This intradamine trade on a real trading account)." First, we need to obtain statistical data, without which the second part of the system will not work. We will need to open on 7 trades (one per currency pair, I chose the 7 best currency pairs for this strategy) every day at a certain time for the "static part" and 3 deal (one of the pair, who have shown the best results in the demo account static part) on a real trading account "real part". "The static part (trade on a demo account)." For its implementation you will need to open a demo account with the necessary parameters. I recommend this Brokera1, since it is he has a demo account with the necessary parameters. And I recommend to anyone who is going to trade for this strategy is to open a demo account with those parameters, what I say. Just because the majority of traders in the "static part" will obtain the same results. This is a very important reason, I will explain at the end of this material. So, checking in at Brokera1 and open a demo account MT4 Demo Pro, account currency is USD. 1:500 shoulder, say the initial deposit (does not matter, the main thing to have enough) 10000 (can be to choose the amount, at any time, you can fill up a virtual account (free) currency through personal cabinet as open as many of these demo accounts let if you want to test different versions of the strategy at the end of this material). Trade is conducted on the following currency pairs: EURUSD, GBPUSD, AUDUSD, USDCHF, USDCAD, EURJPY. I recommend immediately open seven different windows on each currency in the window open for the convenience of one click trading (small triangle in the upper left edge of the graph). The "static part" transaction volume for any currency pair is always equal to 0.10 of the lot, it's important! Once put it in a window "one click trading", Metatrader remember this value. Open the transaction must be within the recommended hours of me (of course, can be a little earlier or later, but I recommend it to 01:00 UTC + 2, then traders will be approximately the same results), namely 2 hours after the closing of transactions (all transactions are closed overnight with the help of advisor eCloseOnTime (which you need to download and install and run on any of the charts, it will close all transactions in the terminal. closing time transactions in the terminal (UTC + 2) default advisor is already set up at this time, so you just have to install it and run to check the correctness of the time. Recycle it is not necessary, he works 5 days a week, closing the deal at the same time). If this is the opening of the transactions. For each currency pair, we should choose the direction of the transaction. For this we need a statistical table of results. How it correctly to fill, please visit "position of the traders "(Be sure to read this page! It is part of the description of the strategy). Once you have filled the table. I will explain how we calculate the leader who will be our signal source to a particular currency pair for a week. these signals weeks providers should be calculated on the weekends when the market is closed, on the basis of the obtained statistical data for all trading time and use them all the upcoming trading week. for each currency pair is calculated its source. This occurs in the following way. The columns in this table look like this: Date ... Source signala 1 Source | EUR / USD. Take for example on EURUSD data. We calculate the leader signals for this currency pair. To do this, we carry out the analysis of static data. At the bottom of the table for each data source we have to be the result of the sum-of (It corresponds to the amount of income / pages if we quote only in the source seals from the beginning of the reference tables). We find the greatest "absolute value (even if with a less sign, for us, the main thing is the most large absolute value among all sources for a pair of determined currencies)", in our case for the Eurusd. Tell it with the outforex result in "-12000" and then urged and obtain our commercial signals in a demonstration account the next week (we chose and change (if the change of the lader) the sources of the same week and work with them all week). Having the week do the same for the next week of negotiation. In addition, we need another source of backup (in case it does not work or the sign cannot be read or purchased or 50/50 distributed). Let's say that the second best result shows Etoro "10000" with the Més sign. We take note of the seas, then we fell short, because this is a negative (-12000) and our goal is to obtain profits, instead of périda). Signal 2 ETORO (it does not develop and merchandise, as well as the majority of the source operations of the source (we follow the crowd, the principle is described in the página "merchants of position") if the 1 It does not work, using signal 2 for the opening of the results of the negotiation transaction for each ... day registration in the column with the name of the currency pair, in this case in the EUR / USD (for The result of the negotiation of this column, is intended). Similarly, we calculate two of the best for the other currency pairs and tnuocca na nepo ot yrassecen si tI .gniliated " tnuocca tcerroc eht nepo ot " egap a si ereht etisbew siht no tnuocca der eht roccan I .sretemarap niatrec tnuocca ot deen osla ew ,edart laer a no edart( trap laer ehT" ".snoitisop 'sredart" eht ni debircsed , elbat eht fohe became a signal supplier when he negotiated with the strategy (since a few months they grew more than 200% of an initial deposit, allowed me to enter between the first ten and get many socryptors and earn extra money). to trade in a live account that opened for "static part" only real (mt4 procent, account od leverage 1.: 500), opens through a personal account ((account section). This corridor has no deposit bonus, the size of od 30, which can be heard in a real commercial account with the desired configuration. can also be accessed from the personal account with the desired configuration. recommend brokera2, myself changed under the scheme that possesses the static and real part of the strategy for different brokers. especially in brokera2 has advanced system backup transactions, which is very convenient to hear. then, after the account is opened and replenished by the amount you decide to invest. Three questions are still discovered; what are the three currency pairs to trade, in which direction to open the transaction and how much to be established for each transaction, especially in order, to start, do not forget the adviser who closes the agreement at a certain time each day of negotiation, if a real commercial account with brokera2, your commercial server running in the time zone utc + 1. the appropriate advisor must be configured to close the offers at 21:59. you can download a preset advisor at this time. if you are going to trade with broker1, or the same setup as the consultant, as in "static part" (transactions closing at 22:59). since the "real part" in this version of the strategytrade only 3 pairs of currency. I recommend installing advisor to close transactions in the "neutral" currency pair, in which we will not trade, say in eurchfe bluohs Level nigram eerf ruoy, E esaercni's revrut / sdnuf Fo Lawardhtiw / tisoped eht retfa emit tsrif eht ni denepo tsuj Uoy ybed eddised noited =tdised =nerorp fi ,lles ew hcihw ,sriap ycnerruc fo rebmun eht(3 yb gnidrocer rof LANIF eht fi ,si taht ,)puo a deruces of the oils of the oil that fi fi NAVE( noitover rehtona dda dluohs ew 2Langis morf semoc taht oil lanife ,gnidart foapmi "Evitagen" Ew fi taht ecnereffid eht ,"trap citats" eht ni Emas .snoitcasnart FO Noitcerid .)DSU / Rue Elpmaxe ROF( riap ycnerruc eht FO emman Eht nmuloc eht srup eht ta eud rada srup eht ta euper semom ton semom. Eht sriap ycnerruc 3 esoohc dna "Trap citats" fo elbat detelpmoc eht esylana ew ,tceles ot ,elpicnirp gniwolf eht if keew gadart sdneew ehtnee htnep er .erutcip eht elpmaxe .Lanimret eht by Wodniw Ruoy Fo Foe hcae rof gninepo retfa ,thgir eht no ,ton liw hcihw dna ,fhcrue FO Rof .) Did 2000% (this level is shown at the bottom of the terminal, open orders). The increase in billing. Once you have started operating after closing the offers, your balance exceeds your initial deposit must be increased (to count and install) a new volume for each pair. This can be done when there are no open positions, i.e. any day of the week, before opening new transactions and after the closure of the old (volumen calculated for each currency pair using the same formula, depending on the amount of the New Balance amount, and that after the first deposit). Each new balance increase it again, trading, then we increase the volume of transactions again. If there is a reduction (decrease in the balance), the negotiating volume does not decrease and sell it for as long as it does not exceed the registration of our maximum balance. Then, again adjust (instead) the amount for the same formula. Departure / Input / Overcoming The balance can be carried out at any time when there are no open transactions, i.e. at two-hour intervals from Monday

to Friday or weekends. After that, it does not work without performing the adjustment volume for each pair along the same line. In fact, that is all the basic information to exchange this strategy in the real business account. The site presents an already full table that allows you to trade in a live account (only you can calculate the leaders for the week, depending on the general business results). Why for me is the best strategy for Forex. Not only did it allow me not to "fuse" the balance, but also increase it and how long it had not changed. I never fell under an initial deposit. I mean, for me, it somehow becomes a Forex profit strategy. Of course, to say it's a sasivid sasivid ed laicos aigetartse amsim aL .opmeit led etrap royam al rasergni arap setnaicremoc sol ed aÃroyam al a ra±Ãagne arap odazinagro ©Ãtse xeroF euq ed ohceh lE .ose rop se Y .Ãuqa aziminim es adidr®Ãp ed laicnetop le orep ,ogseir nis ratse edeup on elbatner The reverse - the market is trying to "do" you, this strategy "inflate" the market, and then go in both. And if all the rules of this profitable Forex strategy to break completely, so you behave like a market, not as a merchant. I promised to tell you why I put it for free in free access. As you have learned to the year of this strategy, it must be a lot of statistical data that we recorded in the table, as described in the "statistical part" strategy. For a person it is a lot of

work and a great load. Especially the need to open the transaction is not always a good time (because the majority of the EC is the night). In my case, it is more than the number of exits, which prevented the complete table and trade. But to have a good time (because the majority of the EC is the night). In my case, it is more than the number of exits, which prevented the complete table and trade. But to have a good time (because the majority of the EC is the night). now a social social strategy is available for everyone and all will share with all the statistics and all will be in the hands of the statistical data for all commercial days and can use them. For example, you are negotiating in the strategy and filling the table without interruption 2 months in a row and decided to go on vacation for two weeks. When you return your static data it is no longer relevant, the table has two weeks if it does not fill. This is exactly the strategy affect profitability. But if before leaving you you sent it to me and made it lying on this website or on the forum (as will be established so that I am his then Lay) in free access, then another new merchant or someone who has just returned from A vacation (trip) will be able to continue the common cause and share it and if everyone will do it, then any merchant (including tão and me) who wants to exchange in the accounts I have, with the parameters that I have, in the same runners I have.
